Mobile: +91 7785084553

Location: Gorakhpur, Uttar Pradesh

CAREER OBJECTIVE

Aspiring Computer Science Engineering student with strong interest in space technology, data analysis, and machine learning. Seeking an internship opportunity at ISRO to apply programming and analytical skills in solving real-world scientific problems.

EDUCATION

Buddha Institute of Technology

Gorakhpur, India

B.Tech – Computer Science and Engineering

Sep 2023 – Jun 2027

Relevant Courses: Data Structures and Algorithms, Database Management Systems, Operating Systems, Computer Networks, Object-Oriented Programming, Data Warehousing and Data Mining, Artificial Intelligence, Machine Learning, Natural Language Processing, Cloud Computing, Software Engineering.

SKILLS SUMMARY

- **Languages:** Python, C++, JavaScript, SQL
- **Core Subjects:** Data Structures & Algorithms, DBMS, OS, CN
- **Technologies:** Node.js, React.js, MongoDB
- **Tools:** Git, Docker (basic)
- **Soft Skills:** Communication, Leadership, Problem Solving, Adaptability, Critical Thinking, Team Collaboration, Time Management

EXPERIENCE

Frontend Developer Intern | Code Alpha | Aug 2025 – Sep 2025

- Developed and maintained responsive web pages using **HTML, CSS, JavaScript**.
- Collaborated with the team to implement UI components and improve website performance.
- Gained hands-on experience in **frontend frameworks and user interface design**.

Python Developer Intern | Eduskill | Feb 2026 – Mar 2026

- Developed Python scripts for data analysis and automation tasks
- Used Pandas and NumPy to process and analyze datasets
- Implemented basic machine learning models for small-scale projects

PROJECTS

- **PharmaShare – Medicine Sharing & Tracking System**
 - Developed a full-stack platform to reduce medicine wastage using predictive analytics
 - Built REST APIs using Node.js and optimized database queries for better performance
 - Applied data analysis techniques to identify usage patterns to improve resource allocation
 - Improved resource allocation efficiency (conceptually) using predictive analysis

Frontend: React.js, Tailwind CSS
Key Feature: Data-driven resource optimization system
Backend & Database: Node.js, Express.js, MongoDB
- **AI-Based Traffic Density Prediction (Concept Project)**
 - Designed a conceptual AI-based traffic density prediction system using computer vision
 - Proposed use of OpenCV for vehicle detection and ML models for congestion prediction
 - Focused on real-time data analysis and smart city applications

• **Technologies:** Python, OpenCV, NumPy, Machine Learning (Conceptual)

TECHNICAL INTERESTS

- Machine Learning
- Data Analysis
- Space Technology Applications
- Problem Solving

ACHIEVEMENTS

- Winner – TechYuva 9.0 Coding Competition (2nd Year)
- Runner-up – TechYuva 10.0 Coding Competition (3rd Year)
- Academic Excellence Award – Scored 80%+ in all semesters
